IT and Information Security Policy

Kestrel Data Labs Pvt. Ltd. (fictional company created for this project)

1. Accounts and passwords

Every employee receives a single company identity used for all systems. Passwords must be at least 14 characters long. Multi-factor authentication (MFA) is mandatory for email, VPN and all cloud tools. Passwords must never be shared, including with IT staff.

2. Devices

Only company-issued laptops may be used to access customer data. Laptops are encrypted with full-disk encryption and must be locked when unattended. Personal USB storage devices are blocked on all company laptops.

3. Networks

The company VPN must be used on any network other than the office network or a trusted home network, for example in hotels, airports and cafes.

4. Reporting security incidents

Any suspected security incident, such as a lost laptop, a phishing email that was clicked, or data sent to the wrong person, must be reported within 1 hour of discovery to the Security Operations team at security@kestrel.example or on the internal hotline, extension 4444. Employees must not try to investigate incidents themselves.

5. Data classification

Data is classified as Public, Internal, Confidential or Restricted. Customer data is always Restricted and may only be stored in approved company systems. Restricted data must never be pasted into public AI tools.

6. Software

Only software from the company's approved catalogue may be installed. Requests for new software are raised through the IT service desk and reviewed by the Security team within 5 working days.
